

Expanding Grid Adoption

Raymond Lee (IDA, Singapore)

APTel Conference

Presentation Title: Expanding Grid Adoption

Today, it is widely acknowledged that the use of grid technology in the research and education communities has been successful. This is mainly because grid technology makes it possible for users to enjoy huge computing power and data storage capacity. However, the use of grid technology in the enterprise space is relatively new. This presentation gives an overall view of some existing projects that IDA has undertaken to bridge this gap and bring Grid technology from the research to the enterprise space, mainly:

Vertical Applications:

Collaborative Engineering Programme

Enterprise-g@Singapore

On demand@Singapore

Games Bazaar

Adaptive Enterprise@Singapore

Horizontal Initiatives:

Secure Grid Access

Grid Interoperability
